By using the Packet Tracer, create the network shown in the figure below.

Then, configure the interfaces and start RIPv1 in all routers. After completion of configuration, verify the routing tables in all routers. And, try to answer the following questions.

1. Which routers have /16, /24, and /30 network entries in their routing tables? Why?
2. Which routers have same missing routes in their routing tables? Why?
3. Are there any route summarization? Why, why not?
